

Les matériaux en question incluent tout type d'artéfact archéologique recueilli, les matériaux de construction, des résidus de fabrication, les matières premières, les restes biologiques (restes humains inclus), ainsi que tout reste de matière organique, communément désigné sous l'appellation de «matériaux mis à jour». Les standards et lignes directrices pour la récupération, la documentation, la conservation et l'analyse du matériel archéologique ont été officiellement adoptés par l'IFA (Institute of Field Archaeologists, ndt), lors de son Assemblée Annuelle du 6 septembre 2001.

Les Standards La récupération, documentation, conservation et analyse de matériaux archéologiques (désormais appelés «étude des matériaux mis à jour») sera suivie de la configuration d'un dossier dûment classé, stable, et accessible, qui fera appel à des méthodes et à des techniques adéquates. L'étude des matériaux mis à jour sera suivie de un ou plusieurs rapports destinés à être divulgués. Les méthodes et les techniques employées devront satisfaire les objectifs définis par tout projet dans le cadre desquels s'inscriront totalement ou partiellement les matériaux mis à jour, ainsi que les exigences du *Code de Conduite*,

du *Code de pratique officiel pour la régulation de projets contractuels dans l'archéologie de terrain*, ainsi qu'aux autres lois règlements intérieurs de l'Institut des Archéologues de Terrain.

Définition de l'étude des matériaux mis à jour L'étude des matériaux mis à jour se définit par l'ensemble des procédés de récupération, sélection, nettoyage, étiquetage, conservation, enregistrement, analyse, interprétation et préparation à un entreposage permanent des matériaux sauvegardés dans le cadre du travail archéologique de terrain, dans le but de la divulgation des données recueillies. Le terme «matériaux mis à jour» vise à inclure tout artéfact, matériau de construction, résidu de fabrication, matière première, reste biologique (restes humains inclus), ainsi que tout reste de matière organique.

Objectif de l'étude des matériaux mis à jour L'étude des matériaux mis à jour cherche à comprendre les sociétés et leur environnement, non seulement au niveau d'un site archéologique déterminé, mais aussi à échelle locale, régionale, nationale ou internationale. Les résultats de cette étude doivent être documentés, et idéalement divulgués sous la forme de un ou de plusieurs compte rendus publics. L'étude des matériaux mis à jour favorise également la création d'une documentation stable, dûment classée et documentée, accessible, servant éventuellement de base à la recherche actuelle et à venir. L'étude des matériaux archéologiques contribue à orienter les stratégies de conservation, préservation, récupération, dissémination, présentation, éducation et gestion, ainsi que les contextes et politiques de recherche à échelle locale, régionale, nationale et internationale.

Incidence de l'étude des matériaux mis à jour Les études de matériaux mis à jour sont susceptibles d'être mis en place dans le cadre des situations suivantes:

- Comme partie intégrante d'une évaluation de terrain, de fouilles, du suivi ou de la configuration d'un projet, ainsi que de l'enregistrement de données
- Comme partie intégrante d'un programme d'analyse de matériaux archéologiques
- Au sein d'un programme de recherche n'étant pas issu d'une menace spécifique

pouvant porter atteinte à un bien archéologique

- Dans le contexte de l'interprétation et présentation des matériaux en question au public
- En tant que résultat des demandes formulées par les membres du public
- En tant que résultat du processus permanent de conservation et entretien de collections dans le contexte d'un entreposage à long terme
- En tant que résultat des exigences légales de protection du patrimoine et de l'héritage culture

L'étude des matériaux mis à jour doit donc être promue ou subventionnée par une série d'organismes et individus, ce qui inclut les autorités de planification locales, des conseils nationaux, des agents gouvernementaux, des propriétaires fonciers privés, des promoteurs de projets ou leurs agents, des archéologues, etc.

GUIDANCE

1 Introduction

1.1 This guidance seeks to define best practice in the execution of finds work and concomitant reporting, in line with the by-laws of the Institute of Field Archaeologists (in particular the *Code of conduct* and the *Code of approved practice for the regulation of contractual arrangements in field archaeology*). It seeks to expand and explain general definitions in the Codes for the practice of finds work and reporting.

1.2 The Standard and guidance applies to all archaeological projects involving finds work, irrespective of research objectives and size. The guidance has been compiled so that all those involved with archaeological finds work, whether excavators, finds research staff, archaeological curators, museum curators, site owners, developers or others, have an agreed framework within which to define the range and extent of activities that must be undertaken in a finds project or in the finds work element of a larger project, thus setting a standard against which compliance can be measured. Compliance necessarily requires resources to be adequately allocated.

1.3 In addition, this guidance seeks to amplify directions given in national planning guidance (see Appendix 6) and to be compatible with current guidelines issued by other authorities, such as the UK Institute for Conservation, Re:source: The Council for Museums, Archives and Libraries, and the Society of Museum Archaeologists (see Appendices 7).

1.4 Finds work must be fully integrated into all stages of the archaeological process, from the earliest stage in project planning. All persons expected to contribute to the finds work of a project should be fully involved with project planning throughout the life of the project.

1.5 The terminology used follows PPG 15, PPG 16, NPPG 5, NPPG 18, PG (Wales) as amended, WO circular 60/96, WO circular 61/96, PPS 6, and guidance issued by the Association of County Archaeological Officers (ACAO 1993, now Association of Local

Government Archaeological Officers - ALGAO), and English Heritage (1991) and Historic Scotland (1996a and b) with amplifications where necessary. It also seeks to take account of differences in terminology, legal and administrative practice in different parts of the United Kingdom and Isle of Man.

1.6 This document provides guidance for work carried out in the United Kingdom and Isle of Man. Although general guidance is given, this document cannot be exhaustive, particularly in its treatment of legislative issues. Archaeologists must ensure they are familiar with the specific legislation and common law pertinent to the area of the United Kingdom and Isle of Man in which they are working. Archaeologists, commissioning bodies and others may find it useful to consult the relevant documents listed in Appendix 6, and can obtain further guidance from the appropriate advisory bodies listed in Appendix 7.

2 Principles: the *Code of conduct* and other by-laws of the Institute of Field Archaeologists

2.1 An archaeologist undertaking finds work must adhere to the principles enshrined in the *Institute of Field Archaeologists' Code of conduct*, and the rules governing those principles

- the archaeologist shall adhere to the highest standards of ethical and responsible behaviour in the conduct of archaeological affairs
- the archaeologist has a responsibility for the conservation of the archaeological heritage
- the archaeologist shall conduct his/her work in such a way that reliable information about the past may be acquired, and shall ensure that the results be properly recorded
- the archaeologist has responsibility for making available the results of archaeological work with reasonable dispatch
- the archaeologist shall recognise the aspirations of employees, colleagues and helpers with regard to all matters relating to employment, including career development, health and safety, terms and conditions of employment and equality of opportunity

2.2 Following rule 1.4 of the Code of conduct an archaeologist shall not undertake finds work for which he or she is not adequately qualified.

2.3 Further, the Code of approved practice for the regulation of contractual arrangements in field archaeology specifically addresses professional conduct in situations where work is sponsored or commissioned on a contractual basis, especially as part of a development controlled by the planning process. It provides guidance on professional behaviour where more than one individual or body is competing for the same piece of work, and seeks to ensure that the terms for all work are clearly defined, normally by contract.

3 Procedures

3.1 Preamble

3.1.1 The importance of finds work to the understanding of archaeological sites is widely accepted. The significance of finds is, however, conditioned by methods of recovery, treatment,

recording, analysis and curation. The following sets out good practice in the administration and implementation of finds work.

3.1.2 Two points are fundamental to the successful organisation of finds work

- finds work needs to be fully integrated into all stages of the archaeological process, from the earliest stage in project planning
- those with the necessary understanding of the contribution finds work can make to a project should be fully involved with project planning throughout the life of the project.

This means people with expertise in the methods of recovery, treatment, analysis and archiving, those with specialist regional and period expertise and persons currently undertaking finds work

3.2 Project identification

3.2.1 Finds work may

- form part of a programme of intrusive fieldwork and subsequent analysis, by whatever route it occurs (whereby archaeological material is removed from the context of deposition in antiquity)
- form part or all of a project of interpretation and presentation of archaeological material to the public, including displays and publications
- form part or all of a programme of curation and care of collections in long-term storage designed to ensure a stable and accessible archive
- be initiated by the requirement to assess, identify and record archaeological material in the context of legislation and practice relating to portable antiquities (eg *The Treasure Act* and its *Codes of Practice*)

An archaeologist should only undertake such finds work if it is governed by a written specification or project design (see Appendices 2 and 3), agreed by all relevant parties as this is the tool against which performance, fitness for purpose and hence achievement of standards, can be measured.

3.2.2 Finds work may also be carried out in furtherance of research that does not affect the long-term stability and accessibility of the archaeological material or its documentation. A written specification or project design may not always be necessary in such circumstances.

3.3 Project specifications and design

3.3.1 Finds work, which can encompass some or all of the activities of recovery, assessment of data, analysis, interpretation, publication, conservation, archiving and storage, must be identified and costed whether it be an element of a programme of fieldwork, or a project in its own right. A project design should be written, setting out a schedule of works in sufficient detail for the work undertaken to be quantifiable, implemented and monitored.

3.3.2 A recovery policy for archaeological material outlining aims and methods should be written for submission as part of a fieldwork project design and specification. This will reflect the number and type of material expected, excavation methods, sampling strategies, finds retention, the nature of soil deposits, and the achievement of the project research aims.

3.3.3 Suitably qualified and experienced archaeologists should be involved in the preparation of the project design and in undertaking finds recovery and analysis.

3.3.4 Those involved with recovery, treatment and packing and subsequent analysis of archaeological material must be fully familiar with accepted methods for its care and storage.

3.3.5 Provision must be made for suitable premises for finds work, both on and off site. Provision must be made for appropriate numbers of suitably trained and qualified staff to recover, process, record and store archaeological material during fieldwork, and to prepare the finds element of the site archive. Provision should be made, where possible, for the continuity of finds staff into the post-excavation phase of the project.

3.3.6 Finds collection and discard policies, strategies and techniques must benefit for the defined purpose and understood by all staff and subcontractors.

3.3.7 Appropriate provision should be made for the physical/chemical stability and security of finds and the finds archive, both on and off site.

3.3.8 The programme of work will result in a stable archive. A good model for which is defined in Management of Archaeological Projects 2, Appendix 3 (English Heritage 1991). The relevant procedure and operational policy papers published by Historic Scotland are: Project Design, Implementation and Archiving (Historic Scotland Archaeological Procedure Paper 2) and Publication and Archiving of Archaeological Projects (Operational Policy Paper 2). The specification or project design should identify relevant data standards for records organisation and content that will be used in information recording systems employed by the project.

3.3.9 The project design should address assignment of ownership of archaeological material and requirements for the deposition of the archive with a recipient museum or repository.

3.3.10 It is essential that communication and liaison between all project workers are maintained throughout the programme to ensure dissemination of information and monitoring of project progress. It is vital that specialists liaise directly with the illustrator/photographer working on the material.

3.4 Fieldwork

3.4.1 During invasive fieldwork, the recovery policy for archaeological material should be kept under review and, if necessary, amended. Any changes in recovery priorities or procedures should be agreed and documented for inclusion in the project archive.

3.4.2 There should be a presumption against disposal of archaeological material during invasive fieldwork. Any disposal that does take place should be on academic and professional grounds

and, where possible and appropriate, in consultation with the receiving museum. The reason for any disposal, the manner in which it is done, and where the material was disposed should all be documented in the fieldwork archive.

3.4.3 Selective sampling of archaeological data is a valid method of saving valuable time and resources, especially when dealing with very large quantities of mundane or repetitive evidence. Any sampling should be clearly documented and its implications for analysis recognised.

3.4.4 All finds and samples must be collected, processed, sorted, quantified, recorded, labelled, packed and stored according to the project design, or agreed with the archaeological curator, planning archaeologist or recipient museum or repository. Provision should be made to consult designated conservators and other specialists in circumstances which require specialist advice. An archaeologist must ensure that digital information, paper and photographic records should be stored in a secure and appropriate environment, and be regularly copied or backed up, and copies stored in a separate location.

3.4.5 Health and Safety take priority over archaeological requirements. All people conducting finds work should do so under a defined Health and Safety policy. Archaeologists undertaking finds work should observe safe working practices; the Health and Safety arrangements should be agreed and understood by all relevant parties before work commences. Risk Assessments should be carried out and documented for every project. All archaeologists have a professional and moral responsibility to report unsafe practice.

3.5 Post-excavation Assessment

3.5.1 After processing, including conservation, recording and marking, the finds assemblage must be assessed to give an overview of its potential to meet the research aims of the project. The value of the archaeological material for research and/or educational use beyond the terms of the project design should also be recorded. The recommendations for the extent or depth of further analysis of all, or selected components of the finds assemblage should be given and justified at this stage, and will contribute to the up-dated project design. The assessment will also determine the resource requirements for analysis and identify conservation needs both for analysis and long-term storage and curation. Further analysis should not proceed without the assessment.

3.5.2 Assessment of finds material recovered from intrusive fieldwork cannot be undertaken without knowledge of its provenance. Information on context, phasing, date and methods of retrieval and an internally consistent stratigraphic matrix should be provided for assessment.

3.5.3 In Scotland, a list of all finds from fieldwork must be supplied either to the Treasure Trove Advisory Panel or, in cases of fieldwork funded by Historic Scotland, to the Finds Disposal Panel.

3.6 Post-excavation Project Design

3.6.1 An updated project design will incorporate contributions from finds assessment.

3.6.2 The updated project design will specify the methods and resources for each category of

finds work required to fulfil the project's revised research aims.

3.6.3 The updated project design will include a task list indicating which personnel will undertake which finds tasks, the methods by which the tasks will be carried out, the duration and cost of each task including archive preparation and deposition, and the intended scope and nature of dissemination.

3.7 Analysis

3.7.1 All analysis must conform to the project design or postexcavation project design, any variation must be confirmed by all relevant parties in writing.

3.7.2 All techniques used must be demonstrably fit for the defined purpose(s), and comply with relevant legislation.

3.7.3 Those carrying out the work should be suitably qualified and experienced, and fully aware of the work required under the project design or post-excavation project design.

3.7.4 Analysis may include examination and quantification leading to the identification of function, form, date, method of manufacture, material/fabric type, source, parallels, attributes and condition of artefacts; of the exploitation of wild or domesticated resources; the reconstruction of environments; and the nature of human populations. The use of regional (where appropriate) reference collections is essential. Post-excavation work is normally an iterative exchange of information between project team members which may refine by agreement the scope and structure of the report.

3.7.5 Material sent to, and retrieved from, outside specialists must be appropriately documented, packed, and transported.

3.7.6 A stable, accessible archive must be created. All data generated as a result of analysis should be included in the project archive.

3.8 Publication & Dissemination

3.8.1 The publication format should conform to the project design.

3.8.2 Subject to the project design, any publication should include sufficient finds data and illustrations to support all the conclusions drawn from the evidence and permit interpretation to be challenged. Published finds data should be capable of being linked to provenance and phase and evidence from the finds should be included in the overall discussion and conclusions.

3.8.3 Subject to the project design, published finds reports should describe the methods employed during assessment and analysis and indicate any constraints on report preparation. It should include a quantification of all material categories, including those not selected for analysis or publication, with a statement outlining the reasons for selection. The dates of commencement, completion and revision should be published.

3.8.4 The report should discuss factors affecting the reliability of the evidence and its

contribution to such issues as dating, phasing, site formation processes, socio-economic trends, technology, climate and demography.

3.8.5 Contributors must be given the opportunity to check and correct their reports during any major revision of the text, to correct the final draft and, wherever possible to check proofs. Specialist authors must be allowed to read and comment on sections where their data has been integrated and synthesised. All specialists should be credited in the publication in a way that makes the nature and scope of their contribution clear. The names of finds illustrator, photographer and conservator should be included. If specialist finds work comprises a substantial part of the publication, those specialist(s) should be credited as coauthor(s).

3.8.6 The final report should specify where every component of the archive is deposited. Accession numbers given by the receiving institutions should be published whenever possible. The existence and location of unpublished documentation, if known, should be indicated.

3.8.7 Consideration should be given to publicising the results of finds work through a range of media, from conventional archaeological publications to, for example, display panels, exhibitions and lectures, open days and school visits, radio and television programmes, videos and popular publications and the Internet.

3.9 Monitoring

3.9.1 Where finds work is part of a fieldwork project it should be included in the overall project monitoring process. Archaeologists should also expect representatives of the planning authority to ensure that standards are met. In Northern Ireland, where any search for archaeological objects must be licensed, this monitoring will be undertaken by representatives of the licensing body, and in some parts of the UK (but not Scotland) representatives of the receiving institution may monitor finds work.

3.9.2 Specialists may also be monitored by project managers to ensure the requirements of the project design are met. A monitor should be suitably experienced and qualified, or have access to appropriate specialist advice, according to the specified purpose of the monitoring.

3.10 Archives, Ownership and Deposition

3.10.1 The requirements for archive preparation and deposition must be addressed at the outset of the project. The proposed recipient museum or other approved repository must be contacted at the project planning stage and arrangements for deposition of the material archive should be detailed in the specification and/or project design. In Scotland, the practice is for finds to be deposited, via the Treasure Trove Advisory Panel or the Finds Disposal Panel, with the recipient museum and for the paper and photographic archives to be deposited separately with the National Monuments Record (at the Royal Commission on the Ancient and Historical Monuments of Scotland). Copies of necessary records are deposited with the archaeological material. All necessary copies of archive material should accompany the finds material. In Northern Ireland, the practice is to deposit the finds and environmental material with the Ulster Museum and the paper archive separately with the Environment and Heritage Service, DOE.

3.10.2 The archive, including all retained artefacts and ecofacts, must be treated and packaged

in accordance with the requirements of the recipient museum/repository and national guidelines (Museums and Galleries Commission 1992, Society of Museum Archaeologists 1992, UKIC 1983, 1984, 1988 and 1990, Ferguson and Murray 1997, Scottish Museum Archaeologists 2000). The treatment of human remains will be governed by the relevant legislation and government regulations (Historic Scotland 1997a).

3.10.3 In England, Wales, Northern Ireland and the Isle of Man ownership of objects rests with the landowner, except where other law overrides this (eg Treasure Act, 1996, Burials Act 1857). In Scotland, in the absence of an original owner or his/her demonstrable heir, ownership of objects rests with the Crown. The archaeologist undertaking the fieldwork or the planning archaeologist must make this clear at the inception of the project (in the brief/project outline, specification or project design).

3.10.4 It should be noted that in England, Wales, Scotland, Northern Ireland and the Isle of Man there are differing finds reporting and deposition procedures. Archaeologists are advised to seek specific advice on excavation and export procedures as in some instances licences are required. In England, Wales, Northern Ireland and the Isle of Man ownership of objects rests with the landowner, except where other law overrides this (eg Treasure Act 1996, Burials Act 1857). Under the Historic Monuments and Archaeological Objects (Northern Ireland) Order 1995 it is a statutory duty for finders to report all archaeological objects, whatever their material composition, to the Environment and Heritage Service, DOE, or to the Director of the Ulster Museum or, failing that, to the officer in charge of a police station, within fourteen days, unless they are uncovered as part of a licensed excavation. In Scotland all finds of archaeological objects must be reported to the Crown, normally via the Treasure Trove Advisory Panel or the Finds Disposal Panel. The archaeologist undertaking the fieldwork or the planning archaeologist must make this clear at the inception of the project (in the brief/project outline, specification or project design).

3.10.5 Except in Scotland, it is the responsibility of the archaeologist undertaking the fieldwork to endeavour to obtain the written consent of the landowner for finds donation and deposition with the recipient museum.

3.10.6 Except in Scotland, in the event that the landowner is unwilling, for whatever reason, to donate the finds to the appropriate recipient museum, the archaeologist undertaking the fieldwork must endeavour to ensure all artefacts and ecofacts are recorded, safely packaged and conserved where appropriate before transfer to the owner, and that their location and ownership are stated in the site archive and public record. It should be noted that the owner's explicit (written) permission is required before entering such personal information in the public record (see inter alia the Data Protection Act 1984).

3.10.7 In Scotland, all archaeological artefacts, irrespective of raw material, may be claimed on behalf of the Crown under common law. This applies no matter where, or on whose property, artefacts are found. As noted in paragraph 3.5.3., all finds must be reported to the Treasure Trove Advisory Panel or, in the case of artefacts from fieldwork funded by Historic Scotland, the Finds Disposal Panel. Ownership in either case is passed to the museum which receives the finds at the end of the allocation process.

3.10.8 The rules of ownership applicable to material which has come from a vessel (ie all those classified as 'wreck') are dealt with under the Merchant Shipping Act 1995 (see Appendix 6). In cases of wreck material the Receiver of Wreck, in the Maritime and Coastguard Agency, should be contacted.

3.11 Other Considerations

3.11.1 It is advisable for finds work to be covered by a written contract or agreement to which the specification or project design may be attached.

3.11.2 Archaeologists should be aware of, and fulfil, the requirements of the appropriate SMR. These should be included in the specification or project design.

3.11.3 Archaeologists should be aware of, and fulfil, their legal obligations with regard to human remains (see Garratt-Frost, S, 1992. The law and burial archaeology IFA Technical Paper 11 and Historic Scotland Operational Policy Paper 5 The treatment of human remains in archaeology).

3.11.4 Archaeologists should be aware of, and fulfil, their legal obligations with regard to copyright (see Ferguson, L.M & Murray, D.M., 1997 Archaeological documentary archives, IFA paper 1, Appendix 4). It is normal practice for both copyright and ownership of the paper and digital archive from archaeological work to rest with the originating body (the archaeological organisation undertaking the work). The originating body deposits the material with the recipient museum or repository on completion of the contracted works, and normally transfers title and/or licences the use of the records at this stage. These arrangements may be varied by contract, and for the avoidance of doubt it is advisable to include statements on ownership and copyright in a written contract or agreement.

3.11.5 Archaeologists should be aware of, and fulfil their legal obligations to report all finds defined as Treasure (The Treasure Act 1996) and to any other legislation within the UK which is relevant to archaeological finds (eg the Merchant Shipping Act 1995, the Burials Act 1857). (For obligations in Scotland see Treasure Trove in Scotland: Guidelines for Fieldworkers, Scottish Executive, 1999).

3.11.6 Archaeologists should pay due consideration to legislation about copyright and intellectual property rights, plagiarism and to issues of accessibility to research.

3.11.7 Archaeologists should be aware of and fulfil their ethical and professional obligations with regard to portable antiquities and finds for which the provenance is unclear.
{mospagebreak}

ANNEX 1: Checklist for Finds Work

This Standard covers the following actions relating to finds work.

Project planning

Gather information on the site and its vicinity, including

- the nature of the site (geology, geography, soil conditions)
- consultation of the SMR and local museums for earlier finds
- predicted period and type (e.g. urban, rural, village, manor) of site
- previous intrusive or non-intrusive investigation
- ownership and requirements for the deposition of archaeological material

Contribute to the setting of the project's research aims.

Identify, and liaise with, all project specialists.

Carry out costings for the fieldwork and assessment stages of the project.

These will be based on the information acquired above and the predicted scale, and agreed sampling policy, of the excavation.

Costings will take account of

- estimated finds recovery rates and material types
- feedback of information to fieldwork staff
- processing time
- provision for x-radiography of all ironwork and emergency conservation
- materials required for packaging and documentation
- staff time, including any external specialists and related transport costs
- provision for box storage grant for recipient museum or other approved repository

Once the project design has been accepted, inform all specialists and agree the provisional timetable for the project.

Establish the processing procedures both on-site and off-site, and agree areas of responsibility within the project team.

Set-up the processing area, ensuring that it:

- complies with all Health & Safety regulations;
- is secure;
- has adequate light, heat and water sources;
- has adequate room to both work in and form an interim storage area for non-sensitive finds;
- is furnished with the necessary equipment, materials and furniture.

Once excavation is completed, ensure that all finds are documented and packaged appropriately.

Submit all ironwork, and any other metals deemed necessary, for x-radiography.

Assessment

In order to assess the potential of the finds to address the project research aims it is necessary

to

- quantify the assemblages by material and state their condition
- state their provenance, including how retrieved (hand excavated, metal detected, within soil samples), and contextual integrity
- provide an identification and date range of the assemblages
- identify both the extent to which the assemblages can contribute to each of the project's stated aims and any new aims which may be addressed

An updated project research design must be compiled in consultation with all project specialists and this will include

- identifying finds requiring further analysis, in order to meet the project's research aims
- a method statement detailing how further analysis will be carried out
- a detailed task list of work to be carried out, including further analytical, stabilising or display conservation
- the cost of this work
- a timetable for each task
- publication scope and format

Analysis and report preparation

The assemblages must be analysed in accordance with the stated project research aims and agreed method statements. This work will normally include the preparation of catalogues and publication reports. All reports from specialists should be acknowledged and retained as part of the research archive.

Archiving, accessioning and dissemination

The material and documentary archive should be deposited with the recipient museum or other approved repository according to their stated requirements.

Seek to obtain from the owner of the material archive transfer of title to the recipient museum or other approved repository upon deposition (in England, Wales and Northern Ireland), if not already established.

The archive, both material and documentary, should be deposited in the recipient museum or other approved repository for longterm storage, and where appropriate be accompanied by a storage grant.

A security copy of the fieldwork archive (in Scotland the original) should be deposited with the NMR and a summary statement of the results of the project should be transmitted to the local SMR. In Northern Ireland it is a condition of the licence that a summary report is forwarded to the licensing body within four weeks of the end or temporary cessation of fieldwork. The licensing body also maintains the Monuments and Buildings Record (MBR) and should receive the original fieldwork archive or a complete and comprehensive copy.

A report of the excavated materials and analyses should be disseminated and, where appropriate, published.

Attention is drawn to the material in Annexes 2 and 3 of the Standard and guidance for archaeological excavation, which list the contents of a MAP 2 Post-excavation Assessment Report and a Historic Scotland Data Structure Report respectively.

ANNEX 2:

Recommendations for digital archives

Projects vary in their organisation and implementation, even where standards and best practice are employed. This annexe thus provides a checklist for the types of data to be included in the digital archive of finds work. Where that data does not exist it need not be created. Where it is not available in digital format, it need not be digitised. The archive has two components: the minimum archive is the index level record; with other materials as appropriate. Thus, the archive should consist of:

1. Index level record

An index level record for the finds work conforming to standards agreed by local and national agencies. The exact content and structure of that record should be agreed with the local agencies and identified in the project design. Local circumstances will dictate form of delivery though digital supply should be preferred, in order that the record may be appended to existing databases without the need for manual data entry. If the finds work forms part of a programme of field work, it is especially important that this should be documented in the index level record, to assist future researchers.

2. Other associated data sets

Other associated data sets as identified in the project design should be included in the digital archive, where these exist in digital form.

The precise composition of the archive will vary with local circumstances and the nature of the analysis. In broad terms, however, the digital archive should include data sets such as databases of finds catalogues, specialist databases derived from analysis, digital images, project specification documents and updated project design documents associated with the finds analysis, recovery policy documents, as amended during fieldwork, sampling policy documents and post excavation assessment report

Data creation

All data created as part of a project should follow standards and guidelines for good practice. Data that is being deposited in a digital archive and should be supplied in a form consistent with that archive's deposition guidelines.

Further guidance on the management and archiving of digital data can be obtained from the Archaeology Data Service, summarised in part in the "Guide to Good Practice" series. Contact details for the Archaeology Data Service are included in Appendix 7. In addition standards for data and records management from the museum community may well be relevant to archaeological finds work. Contact details for MDA, The Museums Documentation Association,

are included in Appendix 7.

More...

General appendices to standards (1 to 7) can be downloaded from our server [[PDF](#)] (in english).
